About the only folks who deny the GHE are the sky dragon slayers at Principia Scientifica, whom even the skeptics dismiss.

Time for the Slayers to Put Up or Shut Up
May 10th, 2013 by Roy W. Spencer, Ph. D.
I have allowed the Sky Dragon Slayers to post hundreds of comments here containing their views of how the climate system works (or maybe I should say how they think it doesn’t work).

As far as I can tell, their central non-traditional view seems to be that the atmosphere does not have so-called “greenhouse gases” that emit thermal infrared radiation downward. A variation on this theme is that even if those gases exist, they emit energy at the same rate they absorb, and so have no net effect on temperature.

I have repeatedly addressed these views and why they are false.

JC comment. Grant was unaware of the previous skydragon threads at Climate Etc. The skydragons continue to expect me to debate them, their preferred forum is a radio debate. While I will never shut the door on skeptical challenges to the science and encourage contributions from those from different areas of expertise, this group beggars belief. I will continue to (barely) follow Claes Johnson’s work to see if he is able to come with anything interesting or publishable. IMO, this group has damaged the credibility of skepticism about climate change and provides a convenient target when people want to refer to “deniers” and crackpots.

A misinterpreted claim about a NASA press release, CO2, solar flares, and the thermosphere is making the rounds

Anthony Watts / March 28, 2013

I loathe having to write this story because I truly dislike giving any attention to the people who are known as the “slayers” from the “Slaying the Sky Dragon” book. They
now operate under the moniker of “Principia Scientific”.

But, somebody has to do it because some really bad mangling of the intent of a NASA press release by the “slayers” group is getting some traction. They have completely misread the NASA study and reinterpreted it for their purpose, claiming in a story titled “New Discovery: NASA Study Proves Carbon Dioxide Cools Atmosphere”:

http://tinyurl.com/c223hjx

+++++++++++++++++++++++++++

And these are well known skeptics.
