Dear authors,

I really appreciate your work in the PBL depth observations. I have a few remarks:

1. The problems you mention with the critical RI in COSMO can be circumvented using the work of

2. Furthermore the authors could make a remark in the paper on how useful the Polly sisters for nighttime PBLs. Since the NBL height is even more critical for air quality than...
the daytime PBL depth. If Polly is also applicable for nighttime, further verification of the new NBL height proposal in this paper is extremely useful (evaluation of the Zilitinkevich paper you refer to):
