Figures 1 and 2: Please revise the layout of panels. You could a layout similar to that of Fig. 3 for the six channels and a fourth row showing the temperature and legend.

Figure 4: Change caption to: Daily maximum UV index . . . . Vertical axes labels are too dense. Either increase the axes height, or reduce the number of labels.

Figure 5. You may consider changing the data to kJ/m²; the vertical axes labels with thousands look quite ugly. Same for Figure 11.

Figures 7 and 8: Labels are too small.

All Figures: Please maintain consistency in the size of labels for all figures.
