Dear authors, congratulations on this nice peace of work. In support of your discussion, I would like to bring your attention to a recent study on satellite-based tropospheric NO2 trends and trend reversals (1996-2017). The sharp decline over eastern China after 2011 is clearly shown on Fig. 4a and 5b. Similar results appear on more regional studies (e.g. Wang et al., 2019) and also in recent PM2.5 studies (Ma et al., 2019).
