S2. Parameterization of relative humidity of liquid-liquid phase separation

Parameterization of the LLPS_{lower} and LLPS_{upper} as a function of O:C ($0.0 \leq \text{O:C} < 0.68$) was obtained using Sigmoidal–Boltzmann curve fits to data from Song et al. (2018) and this study at $291 \pm 1\text{K}$ (Fig.

25 3b).

$$\text{RH of LLPS}_{\text{lower}} (\%) = (-17.2) + \left(\frac{105.8}{1 + \exp\left(\frac{(\text{the O:C ratio}) - 0.68}{dx}\right)} \right)$$

$$\text{RH of LLPS}_{\text{upper}} (\%) = \left(\frac{100}{1 + \exp\left(\frac{(\text{the O:C ratio}) - 0.68}{dx}\right)} \right)$$
